RE: ADDISON STP CULV(14) CONTRACTOR EROSION PREVENTION AND SEDIMENT CONTROL PLAN

Dear Ron:

VTrans has completed its review of the Contractor Erosion Prevention and Sediment Control (EPSC) Plan. The Plan is considered **accepted** once all necessary paperwork has been filed per permit and contract requirements.

The Corps of Engineers requires notification that work is starting by filing the *Work Start Notification Form*. Fill the form out, sign it and forward to the Corps. Make sure to copy the Engineer. The stone pad for the crane is outside the construction limits. The Corps permit only includes impacts below OHW (98' Elev.) to include the stone riprap. You must calculate the additional square area you will need beyond what has been previously authorized. Attached is a layout showing specifically the permanent impacts below OHW. The impacts you are proposing are temporary. Submit an explanation for the additional impacts as well as a layout sheet showing the additional impacts to the Corps for an amendment. Make sure to copy the Engineer.

The Stream Alteration Permit requires you consult with the River Management Engineer prior start in-water work. Please make sure to include the Engineer in any decisions that are made.

I had a discussion with Lakes and Pond about the permanent filter curtain. They felt that the existing filter curtain would work fine with the new box size wise. Just as an FYI.

Make sure that you have authorization per section 105.25- 105.28 prior to using the Kayhart Farm property.

If you have any questions, please contact me at (802) 828-5483.

Sincerely,

A handwritten signature in black ink, appearing to read "William Farley", written in a cursive style.

William Farley P.E., CPESC
